

DICYCLOHEXYLAMINE

Cas Number: 101-83-7

Other Names: N-Cyclohexylcyclohexanamine, DCHA,
N,N-Dicyclohexylamine, Dodecahydrodiphenylamine

Formula: $C_{12}H_{23}N$

PRODUCT INTRODUCTION

Dicyclohexylamine is a primary aliphatic amine with chemical formula $C_{12}H_{23}N$. Dicyclohexylamine appears as a colorless liquid with a faint fishlike odor. It is sparingly soluble in water. As an amine, it is an organic base and useful precursor to other chemicals.

PHYSICAL AND CHEMICAL PROPERTIES

Appearance	Colorless, Non-Visible Impurities
Dicyclohexylamine	99.5429 %
Moisture	0.0200 %
Chromaticity	15 Hz
Aniline	0.0000
Cyclohexylamine	0.0181 %
Cyclohexanol	0.0140 %
Cyclohexane	0.0000 %

APPLICATIONS

- Used especially for production of cure accelerator, lubricants and cutting fluids, for production of anticorrosion agents and in rubber industry.
- Dicyclohexylamine is commercially important in manufacturing sulfenamides
